Notes:

- All rated loads are based on the machine being operated on a firm, level, uniformly supporting surface ground, at any point of 360° around the machine within 78% of tipping load and forward stability factor over 1.15.
- Working radius is the horizontal distance from the center of rotation to the vertical line through the center of gravity of the load.
- To determine the actual load for the main boom, the weight of all lifting devices such as a hook must be reduced from the lifting load.

100ton hock	1.20ton	50ton hock	0.95ton
30ton hock	0.80ton	12ton hock	0.40ton

- When the jib (10.0—22.0m) is equipped, the following weight must be reduced from the lifting load to determine the rated lifting load for the main boom.

Jib length (m)	Aux.Jib	10.0	16.0	22.0
Boom length (m)	13.0~58.0	31.0~52.0	31.0~52.0	31.0~49.0

- To determine the actual load for the aux. jib, the weight of 0.5 ton must be reduced from the lifting load.

- Depending on the number of part lines, the rated lifting load is limited as follows.

Jib length (m) (Offset angle)	Aux.Jib	10.0		16.0		22.0		
		10°	30°	10°	30°	10°	30°	
Weight (t)		0,8	1,9	2,0	2,3	2,6	2,8	3,2

- The rated load shown in bold lines are based on structural strength factors.

Note:

1. The maximum boom length is 25 meters.
2. The rated lifting load indicates the maximum lifting weight of a bucket and its content, Select an appropriate bucket depending on content, so as not to exceed the rated lifting load.
3. The working radius refers to the horizontal distance from the center of swinging to the vertical line through the center of the bucket.
4. Maximum dumping height depends on the height of a bucket attached. In the chart, top clearance of 6 meters is assumed.
5. Maximum digging depth is the value calculated by subtracting maximum dumping height from the maximum lifting range of 35 meters.
6. The aux. jib cannot be used for bucket work.
7. When lowering a bucket using half brake, ensure that the drop height is about 10 meters or less. Use powered lowering as well as free fall when the drop height is higher than 10 meters.
8. The maximum weight of a bucket is 6,2 tons, but it is necessary to use a lighter bucket depending on work cycle and drop height.
9. Avoid sudden acceleration or deceleration while slewing the machine, which would apply dragging the load sideways to the boom.
Be careful especially when a longer boom is used. Note:
