Safety Devices

Hook and boom over-hoist prevention devices	Hook and boom over-hoist prevention devices are used for preventing the crane from the accidents because of the over-hoist.
Hook over-hoist prevention device	When the hook lifts up to certain height and touches the plumb, the limit switch shall be disengaged by the reposition spring, and then the switch cuts off the control circuit. The control relay makes the buzzer alarm and the indicator lights up. At the same time, the rise of the hook will stop automatically.
Boom over-hoist prevention device	<p>The boom upper limit angle is controlled by moment limiter and boom upper limit switch.</p> <p>a. Working condition with boom When the boom upper limit angle is more than 80°, the moment limiter will continuously alarm and send out the signal. The rise of boom will stop. At the same time, the limit switch is cut off. The boom stops rising.</p> <p>b. Working condition with luffing jib When luffing boom upper limit angle is more than 85°, the moment limiter will continuously alarm and send out the signal of danger. The rise of luffing boom will stop. At the same time, the limit switch is cut off. The luffing boom stops rising.</p> <p>When luffing jib upper limit angle is more than 70°, the moment limiter will alarm continuously and send out the signal of danger. The rise of the luffing jib stops. At the same time, the limit switch on the luffing jib is cut off. The luffing jib stops rising.</p>
Moment limiter	<p>The device monitors the work of the crane. You can press the key to set the values of all working conditions.</p> <p>When the actual load is less than 90% of rated load, the screen shows load proportional bar in green color, and no warning alarm from the Safe Load Indicator.</p> <p>When the actual load exceeds 90% of rated load while is less than 100% of rated load, the screen shows yellow color and an intermittent warning alarm sounds.</p> <p>When the actual load exceeds 100% of rated load while less than 105% of rated load, the monitor screen shows red color and the Safe Load Indicator gives continuous warning alarm, and output control signal.</p> <p>When the actual load exceeds 105% of rated load, the monitor screen shows red color and gives out a continuous warning alarm, at the same time the Safe Load Indicator put out control signal to stop the hoisting action of main and auxiliary hooks and boom.</p>
Three-color load indicator	The three-color load indicator is installed on the crane in order to let the personnel on site know the load. The driver and the signal personnel are equipped with the interphone for the convenience of contact.
Anemometer	Anemometer- the wind speed sensor is installed on the top of boom to test the wind speed. The moment limiter displays wind speed.
Drum and slew brakes and locking devices	<p>Brakes: main and auxiliary winch brakes, main and auxiliary derrick drum brakes and slew brake.</p> <p>Locking devices: main and auxiliary winch pawls, main derrick drum pawls and slew locking device.</p>
Load sensor, angle sensor	<p>The load sensor is installed on the pendant bar to test the load.</p> <p>The angle sensors are installed on the boom foot and the luffing jib foot to display the current angles of boom and luffing jib.</p>
Gradienter	The device is used for testing the angle between the machine and the ground.
Angle scale	The angle scale on the boom foot shows the current angle of the boom.
Rope retainer (three and a half circles retained on the drum)	This device is installed on the main and auxiliary hoisting winches to ensure at least three and a half circles of wire ropes be kept on the winch to guarantee safe operation of the machine.
Limit protection of back stop	Back stop limit switch.
Travel alarm	The buzzer alarms.
Slew alarm	The speed reduction control when the boom derrick reaches the limit position. (Quivering prevention).

Specifications

Superstructure

Power device

Model:QSL-9 engine from Cummins
Types:water-cooling,direct fuel injection,with turbocharger actuator
Displacement:8.9L
Rated power output:246kw/2100rpm
Maximum Torque:1424N.m/1500rpm
Fuel tank capacity:400L
Hydraulic oil tank capacity:500L

Hydraulic system

The engine is combined with two main pump, slew pump, cylinder pump, cooling pump, oil supply pump and a group of M7-LUDV valves. The function of the pump system is better than that of the valve system. The travel, derrick, slew and winch can work at the same time. The oil cooler independently controls the temperature. The slew system works independently. The winches work independently.

Control system

The electrical control system and the low speed control system are adjusted by the extreme load. The power output of the hydraulic system may vary with the power output of the engine when lifting the load. The electrical control system of load adjusting makes the engine have the maximum power output and the engine will not switch off within the working range.

Electric monitoring system

The electric monitor has the function of troubleshooting. CAN-BUS the software of BODAS.

The system adopts RC controller from Rexroth with four computers (the engine computer, the computer of main control, the computer of moment limiter and the computer of electric monitor). The logic control of main actions is completed by the computers and hydraulic system.

Main and auxiliary hoist winches

The main and auxiliary winches are driven by the reduction gear. The brake is often engaged.

Main hoist winch

The drum:diameter of pitch circle φ 660mm
The diameter of wire rope: φ 28mm
The length of wire rope:415m

Maximum speed:136m/min

Auxiliary hoist winch

The drum: the diameter of pitch circle φ 660mm

The diameter of wire rope: φ 28mm

The length of wire rope:320m

Maximum speed:136m/min

Boom derrick system

This system is driven by the reduction gear. The brake is often engaged.

The drum:the diameter of pitch circle φ 526mm

The diameter of wire rope

φ 22mm The length of wire rope : 350m

Jib derrick system

The drum: the diameter of pitch circle φ 526mm

The diameter of wire rope: φ 22mm

The length of wire rope : 250m

Dragrope winch

The diameter of wire rope: φ 8.7mm

The length of wire rope: 240m

Slewing system

The slewing system can be turned by 360° ., The reduction gear drives the teeth.

Speed: 1.7r/m

Four pins are locked.

The cabin

The width of the cabin is 1200mm. the cabin can swing and pitch by 20°.The front window is inclined and the posts are designed with the cross section with high strength. There are air-conditioner, heater, rear view mirror, wiper, stereos and fire extinguisher in the cabin. The electric monitor and moment limiter with large screen are in the cabin. The seat can be adjusted.

Lubricating system

Apply grease on the movable points, bearings and slewing chassis at intervals

Counterweight

The rear part is welded and the weight is 86.7t (including 16.4t basic counterweight). The left counterweight has five blocks and each is 6.9t; the right counterweight has five blocks and each is 6.7t. the forged counterweight is about 1.7t.

Undercarriage

Lower frame Weld the steel plate with high strength into X-structure. The crawler frame is connected with lower frame by the driving pin for the convenience of installation and disassembly.

The ballast Two welded blocks installed in front and back of the understructure. The total weight is 17t. Each block is 8.5t.

Track roller Every side has 14 track rollers>All track rollers are equipped with bushings, seals and lubricating oil.

Jack-up cylinders The four hydraulic jack-up cylinders are connected with the beam.

Track shoe The left and right crawlers have 120 track shoes. The width of the track shoe is 1200mm. The tension state of track shoe can be adjusted by the hydraulic jack until the adjusting plate has the ideal position.

The crawler drive The independent hydraulic driving system is within the crawler frame. Every hydraulic driving system has a hydraulic motor. The hydraulic motor and reduction gear in the crawler frame can not exceed the width of the track shoe.

Travel speed 0.8/1.2 km/h

Grade ability 30% (17°)

Working Equipments

The main steel pipe with high strength is imported. The derrick device adopt the structure of pendant bar with high strength.

Boom The insert section has the equal cross section.The top and the foot have the variable cross sections.The boom is the lattice structure.The steel pipes are welded together.The standard boom is 15.2-72.2m.

Light duty boom 75.8m to 90.8m, when the standard boom is 58.6m, 6.7m tapered section is connected. When the light duty boom is 90.8m, the extended section 17.4-32.4m.

Fixed jib combination

Two kinds of angle between boom and fixed jib:10° „,and 30° „,the boom is 45.2-69.2m. The fixed jib is 18m-36m.

Luffing jib combination

The luffing boom is 36.2-60.2m
The luffing jib is 22m-61m

Hook Blocks

250t hook(Optional)

200t hook 150t hook 80t hook

35t hook 13.5t hook

载荷表说明

Notes for Load Chaty

说明

- 本起重机符合GB3811标准, 同时又满足 ISO 4302、ISO 4305标准。
- 载荷表所表示的额定总载荷值为水平坚硬地面上, 理想作业条件的最大允许值。
- 载荷表所示的值以吨为单位, 并基于倾翻力矩78%以内的值。
- 载荷表所示的值基于平衡负载而计算, 不包括如突然停止的冲击负载, 地表状况, 风力负荷及操作速度等影响。如在此条件下, 驾驶员必须进行减载作业, 同时, 载荷表中的值还要扣除如吊钩、吊具等的自重。
- 吊钩自重
250吨钩.....3.98吨, 200吨钩.....3.53吨, 150吨钩.....2.67吨,
80吨钩.....1.43吨, 35吨钩.....1.13吨, 13.5吨钩.....0.68吨。
- 带副臂和副钩而采用主钩吊重时, 应按下表从单主臂吊重工况载荷表中, 减去等效重量。

副臂长度(m)	12	18	24	30	36
副臂安装角10°	5.1	6.5	8.0	9.7	11.5
副臂安装角30°	5.9	7.8	10.0	12.5	15.2

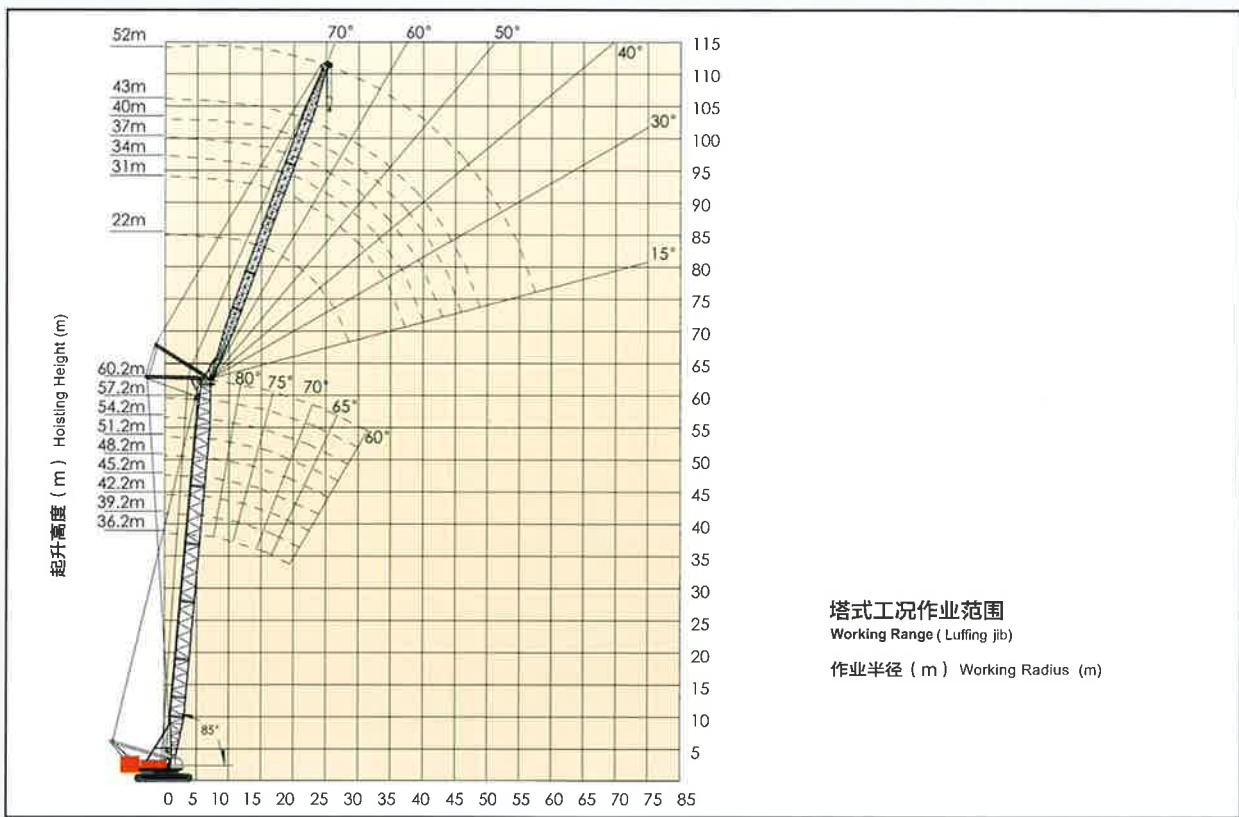

- 固定副臂载荷表是双倍率工况载荷表。单倍率工作时, 相同臂架组合而且相同作业半径下起重能力与双倍率一致, 但是不需大于13.5吨。
- 当塔式副臂接22米时, 塔臂臂头必须加1吨平衡压重, 同时载荷相应折减1吨且工作时吊钩不允许落地, 不工作时副臂角度应在安全角度(65°)以下。
- 平衡重质量为86.6t。
- 侧面时的稳定值最小。

Notes

- Ratings according to GB3811, ISO4302 and ISO4305.
- The rated lifting capacity in the table is the maximum allowed value when the crane works on the level and firm ground and under the ideal conditions.
- The unit in the table is ton and the rated lifting capacity is 78% of tipping load
- The rated lifting capacity in the table is calculated based on the stable load, not including impacting load, the hard condition of the ground and operating speed. So the driver should reduce the corresponding load from the rated lifting capacity. The weight of hook and slings should also be deducted from the rated lifting capacity.
- Weight of hook:
250t hook----3.98t, 200t hook----3.53t, 150t hook-----2.67t.
80t hook-----1.43t, 35t hook----1.13t, 13.5t hook----0.68t
- When using main hook to hoist the load in case of mounting the jib and aux. hook on the top of boom, the rated lifting capacity in load chart (standard boom) should deduct the equivalent weight of jib as shown in the table below.

Jib length(m)	12	18	24	30	36
Jib angle 10°	5.1	6.5	8.0	9.7	11.5
Jib angle 30°	5.9	7.8	10.0	12.5	15.2

- 6.The load chart of fixed jib is often under the working conditions of double parts of line of wire rope. When the crane is working with single part of line of wire rope, the lifting capacity is same as that of double parts of line in some boom combination and working radius. But the maximum load should not exceed 13.5t.
- 7.When luffing jib is 22m, 1ton ballast should be installed on luffing jib top. 1 ton load should be deducted correspondingly. The hook should be kept suspending and should never touch the ground. The luffing jib angle should be less than 65° when the hook does not lift any load.
- 8.The counterweight is 86.6t.
- 9.Least stable rated position is over the side.
